Description	A cylindrical internally threaded fastener, open at both ends with a large flange at one end that can be installed into a prepared hole from the blind side of the ultimate fastening. The outer surface of the insert has ribs (or splines) that extend from under the flange toward the opposite end. The insert is threaded onto mandrel of installation tool and positioned into hole. As mandrel is pulled back, the insert is expanded into the base material it is now gripping. Installation is complete when the mandrel of the tool is removed from the set insert.
Applications / Advantages	Ease of installation makes blind threaded inserts a low-cost way to provide threaded holes in thin sheet metal. Large flange design enhances push-out strength. Ribbed contour of the body provides resistance to turning.
Material	Aluminum: 5056 Aluminum or ALMG 3 alloy Steel: 1006 - 1008 low carbon steel
