1/2-13	7/8	15 ft. lbs.	1 1/2	5930	5800	2360	3440	3270	4860

<b>Description</b>	An anchoring device consisting of (A) an internally threaded conical expander designed with some means (ie. ribs or knurls) to prevent it from turning during expansion; and (B) an expansion sleeve which slips over the expander. The outer walls of the sleeve can be either straight cylindrical or tapered, and the surface either smooth or corrugated. A spherical steel lockwasher at the top of the expansion sleeve is optional.
<b>Applications/ Advantages</b>	A caulking type anchor which provides a quick setting in brick, concrete or stone. The lead shield's malleability enable it to fill uneven or irregular spots in the hole. When tamped, the expansion sleeve holds the expander inside the hole in the masonry, equally distributing the load around the anchor. Fixtures can be removed or replaced without sacrificing holding power.
<b>Material</b>	<b>Cone:</b> May be one of the following materials: Brass, Malleable Iron, Steel or Die Cast Zinc Alloy; <b>Expander Shield:</b> Lead or 3-5% Antimonial Lead Alloy
<b>Tensile and Shear Values</b>	Machine screw anchors shall not be removable or show evidence of failure when subjected to tensile and shear test loads as specified in the above table. The suggested safe working load is one-fourth the average test proof loads shown in the above table.
