Description	Hex nut with a metric thread pitch and a nylon-filled collar at its back end. Class 8, style 1 nuts of a basic diameter greater than M16 are quenched and tempered. When a screw reaches the collar, the threads and nylon form a tight, frictional fit, restricting movement of the screw when it is subjected to vibration. The nylon insert comes in various colors.			
Applications/ Advantages	Class 8 metric nylon insert lock nuts are to be used with screw of a Class 8.8 or less. It is able to be reused more times than a two-way reversible nut. It is less expensive than a Grade-C automation lock nut. Nylon insert lock nuts are designed for use in temperatures from -73°C to +120°C.			
Material	M3 - M16: AISI 1006, 1010, 1022 or equivalent steel  M18 and larger: AISI 1035 or equivalent steel			
Hardness	Vickers HV 5: 302 maximum Rockwell: C 30 maximum			
Proof Load (N/mm²)	800			
Plating	DIN 985 nylon insert stop nuts are usually supplied zinc plated. See Appendix-A for more information.
